

**Dear curious and probably future clients,**

to demonstrate what can be built with the a modern timber frame technique, the team from HofHouse-Portugal have decided to have a open house on **18 June** at one of their construction site between **São Bartolomeu de Messines and Alte** in the Algarve.

Type the following GPS coordinates into Google maps or Google Earth for clear directions:

**37° 15' 31.75'' N / 8° 12' 55. 39'' O**

The property will be open to the public from **10am until 5pm**. The team from HofHouse will be on hand to explain the construction and answer any questions people may have.

We decided to have this special event as most people we talk to still do not have a real idea of what we can build with the modern timber frame technique, so the team will be on hand to dispel any misconceptions people may have.

To make the day a little more lively, refreshments will be on offer and there will be tombola for visitors to be in with a chance of winning a weekend away for two in Madrid.

For the tombola visitors need to bring their invitation received by post or downloaded from their
